

Peripheral Neuropathy

Generally, the most common symptoms of peripheral neuropathy include the following:

- Numbness
- Tingling
- Burning pain
- Unusual and/or loss of sensations
- Muscle weakness
- Deep stabbing pain
- Balance problems

When the underlying cause of neuropathy is discovered and proper support for the nerves are provided, it optimizes the ability for the nerves to heal. Our treatment has four main goals to return nerves to improved function:

1. Optimize the environment within the body for nerve healing.
2. Increase blood flow to the nerves.
3. Stimulate the nerves that are damaged (small fiber, large diameter, or motor nerves) to reduce pain and improve balance.
4. Decrease brain-based pain.

Our proprietary and comprehensive treatment plan utilizes up to eight different state of the art technologies to naturally increase blood flow to the nerves in the feet or hands. No surgery, no addictive medications.

Call today **208-996-3444** to make an appointment for our free neuropathy reversal seminar.
